

PROSPIANT

INDOOR GROWING SOLUTIONS

We create an ideal growing environment for your cannabis plants, while providing ultimate flexibility to cultivate your way.

Unlock the full potential of your indoor cannabis grow with Prospiant.

State-of-the-art HVAC, advanced water treatment and fertigation systems, cutting-edge environmental control, versatile benching options — we have everything you need to build-out your cannabis facility.

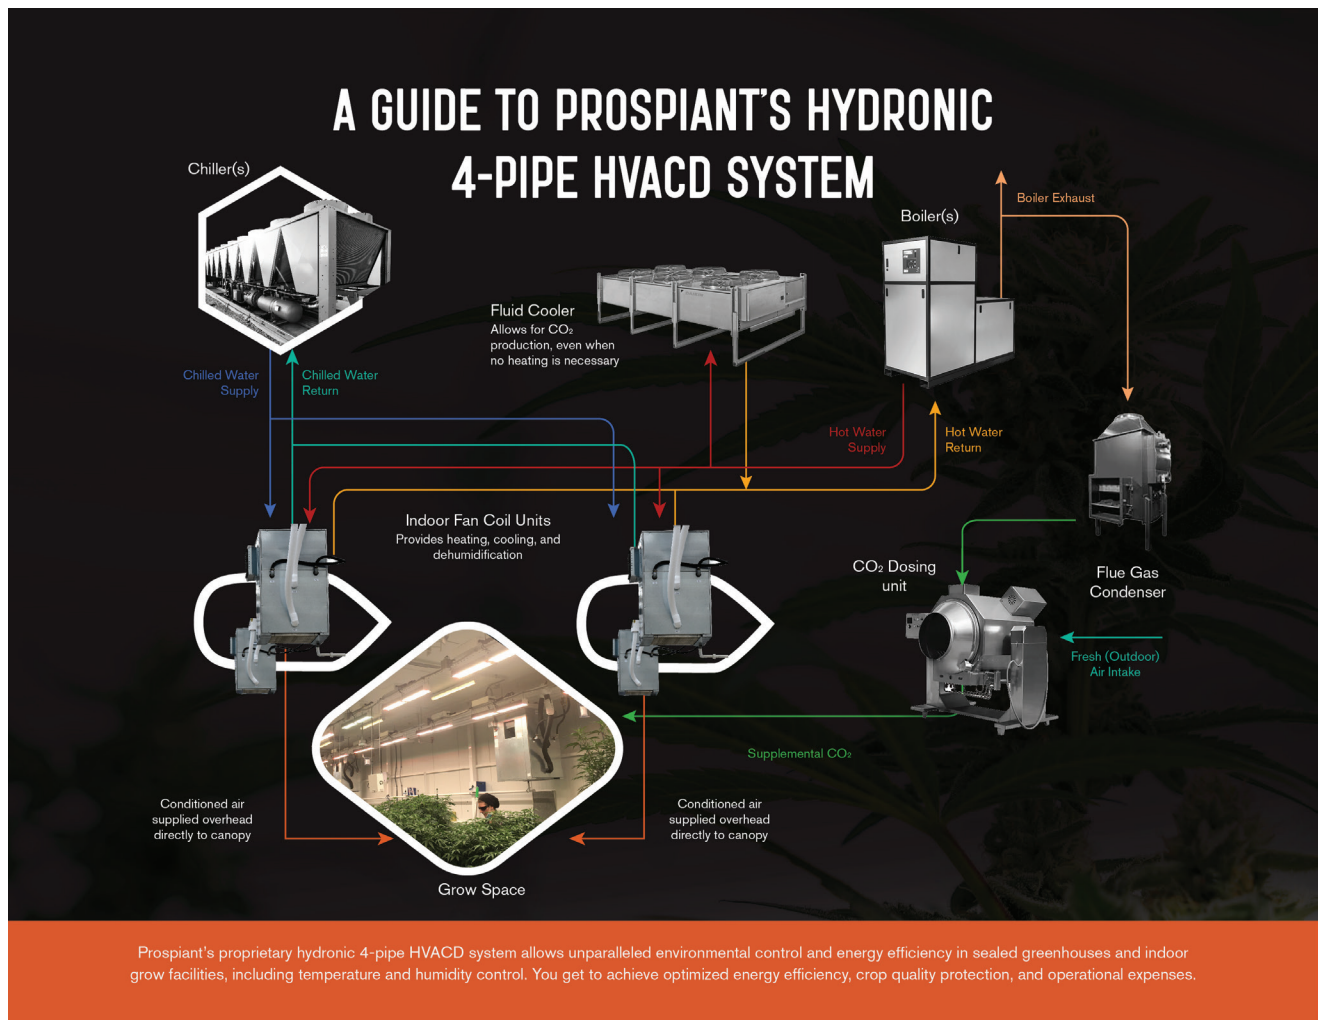

Our experienced team has the technical expertise to seamlessly integrate all your growing systems for maximum efficiency.

Cooling and Dehumidification: Hydronic 4-Pipe HVACD System

In a competitive marketplace, it's critical to save money and use resources efficiently.

Our proprietary Hydronic 4-Pipe HVACD system allows for an integrated approach to provide the best environment possible for your plants while also saving energy.

The optional boiler flue CO₂ system provides free CO₂ grow zone enrichment while you get efficient indoor grow cooling and heating.

Custom Irrigation, Fertigation, and Water Management

We design our irrigation and fertigation systems specifically for the cannabis plant and your unique cultivation needs.

Our internal engineering team keeps up with the latest innovations to offer you the most effective water treatment technologies available.

Do you plan to irrigate an entire 30,000 square foot grow room or pulse irrigate a single column of plants? We have you covered.

Looking to incorporate independent batch tanks for each strain or fertigate several strains with similar compositions? No problem.

Benching Systems

We offer single-tier rolling benches, as well as a variety of multi-tier options. These benches include a proprietary vertical trellis support system specifically for the flower plant stage. In addition, our vertical and horizontal airflow systems for grow rooms ensure proper environmental homogenization of these grow zones.
